ELSEVIER

Comput. Methods Appl. Mech. Engrg. 142 (1997) 377–380

Computer methods in applied mechanics and engineering

Subject Index of Volume 142

Boundary element methods

Comparison of shape design sensitivity analysis formulations via material derivative-adjoint variable and implicit differentiation techniques for 3-D and 2-D curved boundary element, T. Burczyński, J.H. Kane and C. Balakrishna 89–109

A time marching integral equation method for unsteady state problems, J. Su and B. Tabarrok 203–203

Calculus of variations

Analytical computation of differential equations involved in dynamical nonlinear optimal problems, M. Rouff 153–163

Control theory

Analytical computation of differential equations involved in dynamical nonlinear optimal problems, M. Rouff 153–163

Design of programs

Analytical computation of differential equations involved in dynamical nonlinear optimal problems, M. Rouff 153–163

Large scale object-oriented finite element code design, J. Besson and R. Foerch 165–187

Dynamics

A fully symbolic generation of the equations of motion of multibody systems containing flexible beams, P. Fisette, D.A. Johnson and J.C. Samin 123–152

Adaptive Lagrangian modelling of ballistic penetration of metallic targets, G.T. Camacho and M. Ortiz 269–301

Mass lumping emanating from residual-free bubbles, L.P. Franca and A. Russo 353–360

Unlocking with residual-free bubbles, L.P. Franca and A. Russo 361–364

Elasticity

Numerical simulation of chaotic and self-organizing damage in brittle disordered materials, J.G.M. Van Mier, B.M. Chiaia and A. Vervuurt 189–201

Two-level Schwarz methods for Wilson element approximation of elasticity problem, X. Xu and L. Li 257–168

Adaptive Lagrangian modelling of ballistic penetration of metallic targets, G.T. Camacho and M. Ortiz 269–301

On the perturbed Lagrangian formulation for nearly incompressible and incompressible hyperelasticity, J.S. Chenz, W. Han, C.T. Wu and W. Duan 335–351

Electronics
Galkerkin-least-squares finite element methods for the three-field Stokes system in $\mathbb{R}^3$, V. Ruas 235–256

Finite difference methods
Mass lumping emanating from residual-free bubbles, L.P. Franca and A. Russo 353–360
Unlocking with residual-free bubbles, L.P. Franca and A. Russo 361–364

Finite element and matrix methods
Large scale object-oriented finite element code design, J. Besson and R. Foerch 165–187
Numerical simulation of chaotic and self-organizing damage in brittle disordered materials, J.G.M. Van Mier, B.M. Chiaia and A. Vervuurt 189–201
Finite element solution of the Stokes problem with dominating Coriolis force, R. Codina and O. Soto 215–234
Galkerkin-least-squares finite element methods for the three-field Stokes system in $\mathbb{R}^3$, V. Ruas 235–256
Two-level Schwarz methods for Wilson element approximation of elasticity problem, X. Xu and L. Li 257–168
Adaptive Lagrangian modelling of ballistic penetration of metallic targets, G.T. Camacho and M. Ortiz 269–301
A new frictional time integration algorithm for large slip multi-body frictional contact problems, C. Agelet de Saracibar 303–334
On the perturbed Lagrangian formulation for nearly incompressible and incompressible hyperelasticity, J.S. Chenz, W. Han, C.T. Wu and W. Duan 335–351
Mass lumping emanating from residual-free bubbles, L.P. Franca and A. Russo 353–360
Unlocking with residual-free bubbles, L.P. Franca and A. Russo 361–364

Fluid mechanics
Finite element solution of the Stokes problem with dominating Coriolis force, R. Codina and O. Soto 215–234
Galkerkin-least-squares finite element methods for the three-field Stokes system in $\mathbb{R}^3$, V. Ruas 235–256

Fracture mechanics
Numerical simulation of chaotic and self-organizing damage in brittle disordered materials, J.G.M. Van Mier, B.M. Chiaia and A. Vervuurt 189–201
Adaptive Lagrangian modelling of ballistic penetration of metallic targets, G.T. Camacho and M. Ortiz 269–301

General Rayleigh–Ritz and Galerkin techniques
Finite element solution of the Stokes problem with dominating Coriolis force, R. Codina and O. Soto 215–234
Mass lumping emanating from residual-free bubbles, L.P. Franca and A. Russo 353–360
Unlocking with residual-free bubbles, L.P. Franca and A. Russo 361–364

Incompressible and near incompressible media
Finite element solution of the Stokes problem with dominating Coriolis force, R. Codina and O. Soto 215–234
Galkerkin-least-squares finite element methods for the three-field Stokes system in $\mathbb{R}^3$, V. Ruas 235–256
On the perturbed Lagrangian formulation for nearly incompressible and incompressible hyperelasticity, J.S. Chenz, W. Han, C.T. Wu and W. Duan 335–351

Nonlinear dynamics of systems
A fully symbolic generation of the equations of motion of multibody systems containing flexible beams, P. Fisette, D.A. Johnson and J.C. Samin 123–152
Analytical computation of differential equations involved in dynamical nonlinear optimal problems, M. Rouff 153–163

Nonlinear mechanics
A fully symbolic generation of the equations of motion of multibody systems containing flexible beams, P. Fisette, D.A. Johnson and J.C. Samin 123–152
Adaptive Lagrangian modelling of ballistic penetration of metallic targets, G.T. Camacho and M. Ortiz 269–301
A new frictional time integration algorithm for large slip multi-body frictional contact problems, C. Agelet de Saracibar 303–334
On the perturbed Lagrangian formulation for nearly incompressible and incompressible hyperelasticity, J.S. Chenz, W. Han, C.T. Wu and W. Duan 335–351

Numerical solution procedures
A time marching integral equation method for unsteady state problems, J. Su and B. Tabarrok 203–203
Galkerkin-least-squares finite element methods for the three-field Stokes system in $\mathbb{R}^3$, V. Ruas 235–256
Two-level Schwarz methods for Wilson element approximation of elasticity problem, X. Xu and L. Li 257–168
Adaptive Lagrangian modelling of ballistic penetration of metallic targets, G.T. Camacho and M. Ortiz 269–301
A new frictional time integration algorithm for large slip multi-body frictional contact problems, C. Agelet de Saracibar 303–334
Mass lumping emanating from residual-free bubbles, L.P. Franca and A. Russo 353–360
Unlocking with residual-free bubbles, L.P. Franca and A. Russo 361–364

Optimization
Comparison of shape design sensitivity analysis formulations via material derivative-adjoint variable and implicit differentiation techniques for 3-D and 2-D curved boundary element, T. Burczyński, J.H. Kane and C. Balakrishna 89–109

Optimization and design of structures
Comparison of shape design sensitivity analysis formulations via material derivative-adjoint variable and implicit differentiation techniques for 3-D and 2-D curved boundary element, T. Burczyński, J.H. Kane and C. Balakrishna 89–109

Plasticity
Adaptive Lagrangian modelling of ballistic penetration of metallic targets, G.T. Camacho and M. Ortiz 269–301
A new frictional time integration algorithm for large slip multi-body frictional contact problems, C. Agelet de Saracibar 303–334

Solution of integral equations (singularity–method)
A time marching integral equation method for unsteady state problems, J. Su and B. Tabarrok 203–203

Solution of differential equations
Generalized Gear's method for computing the flow of a viscoelastic fluid, P.D. Ariel 111–121

Solutions of ordinary and partial differential equations
A time marching integral equation method for unsteady state problems, J. Su and B. Tabarrok 203–203

Stochastic processes
Numerical simulation of chaotic and self-organizing damage in brittle disordered materials, J.G.M. Van Mier, B.M. Chiaia and A. Vervuurt 189–201

Viscoelastic and viscoplastic media
Generalized Gear's method for computing the flow of a viscoelastic fluid, P.D. Ariel 111–121

Viscous flow
Finite element solution of the Stokes problem with dominating Coriolis force, R. Codina and O. Soto 215–234
Galkerkin-least-squares finite element methods for the three-field Stokes system in $\mathbb{R}^3$, V. Ruas 235–256
